

ACO Stainless - SlotChannel

Case Study

Mentone Girls Grammar, Melbourne, Victoria

Mentone Girls Grammar is an independent day school in Mentone, catering for students in kindergarten up to Year 12. Recently the school redeveloped a third of its campus into a Wellbeing Precinct, with state of the art swimming and sporting facilities.

Project Design Brief

For the indoor aquatic centre, designers were focused on the aesthetics of the facility and wanted a discreet drainage system that wouldn't detract from the tile design. Pedestrian safety was also a top priority and the drainage system needed to have openings no larger than 10mm. With many chemicals and cleaning agents used in pool environments, a corrosion resistant material for the drainage system was required.

ACO's Solution

- **SlotChannel** with 10mm slot and safety edge

Benefits

- The discreet and slim 10mm slot is suitable for pool users and spectators
- SlotChannel manufactured from grade 316 stainless steel for enhanced corrosion resistance
- The outlet units were manufactured with the Tile Insert grate to continue the discreet finish of the drainage system

Other ACO products used

- Commercial stainless steel drainage (ACO Stainless)
