Rockliff Seafoods, Mooloolaba, QLD

Rockliff Seafoods is a Sunshine Coast family owned fishing business that provides premium quality Spanner Crabs, Queensland Scallops and Ocean King Prawns. The produce is sustainably caught in local tropical waters. While the company is a wholesale seafood business, it also sells direct to the public from its wharf complex in Mooloolaba.

Project Design Brief

Seafood processing facilities wash down equipment and floor areas continuously and require an efficient and durable drainage system capable of withstanding salt water from the catch. As the floor area is continually wet, safety of the processing workers is a major concern. A strong and robust drain is also required as trolley jacks move produce around the processing area.

ACO's Solution

- Stainless Steel **SlotChannel**

Benefits

- **SlotChannel** with sloped invert stainless steel channel is suitable for draining water from large level flooring
- The 20mm slot allows small food waste to be washed into the drain and captured in the strainer baskets located in the vertical outlets while larger food waste is prevented from entering the slot opening
- SlotChannel with a solid edge is capable of withstanding heavy loads
- SlotChannel manufactured in 316 stainless steel is corrosion resistant
