## BMW Showroom Adelaide, SA

The new BMW car showroom in Adelaide was recently designed with a full glass facade enabling an uninterrupted view of the cars on display.

The glass facade design created challenges as the air-conditioning ducts were restricted to the floor area instead of the wall and roof.

Additionally, the air-conditioning ducts needed to be aesthetically pleasing and able to withstand wheel loads.

The designers specified ACO's Heelsafe® *Anti-Slip* grates for their sleek appearance and to enhance the floor design and finish.

The 5mm gap in the grate allows for sufficient airflow from the air-conditioning ducts to circulate evenly throughout the showroom.

The Heelsafe® *Anti-Slip* grates, rated to R10 AS4586 (slip resistance) were reinforced to withstand showroom cars moving over or resting on the grates.
